

Amendments to the Specification

Please amend the specification on page 9 by replacing the paragraph beginning at line 3 with the following:

The system provides the infrastructure upon which other key operational parameters not currently part of the CAMEO® system are overlaid to greatly increase their overall information value. These include GPS coordinates of responding vehicles and personnel provided by a GPS receiver 40 as shown in FIG. 5, on-scene video from deployed camera(s) 42 and output from a remote weather station incorporating various chemical sensors 44a, anemometer 44b and thermometer 44c deployed during the incident. Individual responders carrying GPS locating systems 46 integral with their remote handhelds or associated with other equipment are also monitored by the system to add location information on these ~~responders~~ responders to the presentation.
